

Module 3 Quiz – Build Your First AI Flow

1. T/F: n8n is a no-code automation platform used only for Google Apps.
2. What is the function of a Trigger node in n8n?
 - A) Display data
 - B) Execute code
 - C) Start the workflow
 - D) Save outputs
3. Which file format does data move between nodes in n8n?
 - A) CSV
 - B) TXT
 - C) PDF
 - D) JSON
4. T/F: The credentials section in n8n is where you store prompts.
5. Which node type typically uses an API key?
 - A) Start
 - B) Set
 - C) Action
 - D) Merge

✓ Module 3 – Quiz Answer Key

1. **False**
n8n is a low-code platform that supports a wide variety of apps—not just Google Apps.
2. **C) Start the workflow** ✓
Trigger nodes initiate the workflow, whether manually, on a schedule, or via a webhook.
3. **D) JSON** ✓
n8n passes data between nodes using JSON, making it easy to structure and manipulate.
4. **False**
The credentials section stores API keys and authentication details—not prompt text.
5. **C) Action** ✓
Action nodes (like API or integration nodes) typically require API keys to connect with external services.
