

## AI Flow Builder – Cheat Sheet (Module 3)

### Core Concepts:

- Individual AI tools are powerful, but automation connects them for supercharged workflows.
- n8n: Visual, low-code tool for workflow automation.
- Nodes: Represent actions/services (ChatGPT, Perplexity, Sheets, etc.).
- Triggers: Start flows (manual, webhook, schedule).
- Credentials: Store API keys securely for access.
- Data Flow: JSON-based structure passed between nodes.

## AI Automation Flow

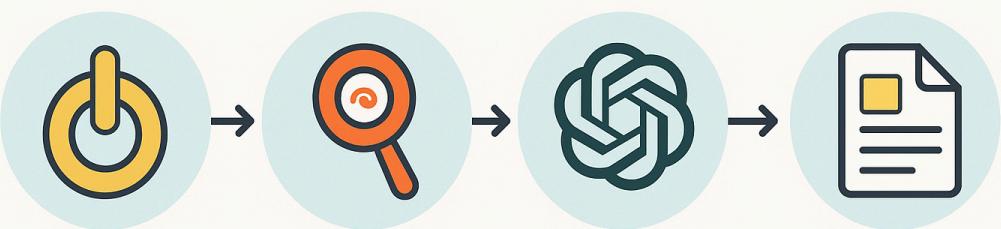

AI tools are powerful — automation links them into high-impact systems.

### Basic Flow Template

1. Trigger → 2. Research (Perplexity) → 3. Draft (ChatGPT) → 4. Output (view/save)

## Basic AI Flow Template

1. Trigger

2. Research  
(Perplexity)

3. Draft  
(ChatGPT)

4. Output  
(view/save)

### Tips

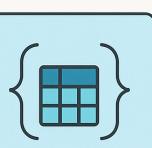

- Use clear, grounded prompts inside your nodes.
- Structure outputs for automation (e.g., JSON).
- Test step-by-step, not just full execution.
- Save outputs to files, Airtable, or Sheets as needed

### Tips for Smooth AI Automation

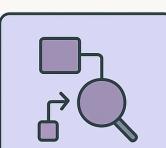

Use grounded,  
clear prompts

Help the model  
stay on task

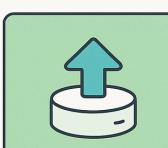

Use JSON  
or tables

Structure =  
automation-ready

Test one  
node at a time

Spot errors  
early

Store results  
to Sheets  
or Airtable

Don't lose  
great outputs
